3. The following is an examiner's statement of reasons for allowance:

In interpreting the claims, in light of the specification and the applicant's arguments filed on 07/26/2004, the Examiner finds the claimed invention to be patentably distinct from the prior art of record.

The prior art of record teaches the claimed invention substantially, but it fails to teach or suggest individually or in combination that a system and method for enabling remote networking functionality by port proxying, comprising: executing a process on a local client computer employing a networking protocol over a port of the client computer assigned to support the network protocol; ***determining whether the port of the client computer assigned to support the network (SMB) protocol is blocked***; on the local client computer, if the port of the client computer assigned to support the network (SMB) protocol is blocked, ***intercepting communications in a first communication format from the process to the blocked port; encapsulating the intercepted communications in the first communication format in a second communication format***; and ***redirecting the encapsulated communications in the second communication format over an open port on the client computer compatible with said second communication format*** as set forth in independent claims 1 and 11. Claims 1-19 are allowed because of the combination of other limitations and the limitation listed above.
